

# googleplusone-ng

DokuWiki plugin that embeds a Google +1 button in your pages.

Default settings embeds button only to footer of [BlogTNG](#) entries.

## Features

- Work with latest DokuWiki version (via **2012-01-25 «Angua»**)
- Configuration via Configuration Manager:
  - Google +1 Lang
  - HTML element for prepend or append Google +1 button code
  - CSS
  - Default post image (aka repost logo)

## FAQ

**Q:** When I try to repost message on Google+ (move mouse on Google +1 button and wait for a some time) I view wrong description text. How I may fix it?

**A:** Google use microdata ([en](#)|[ru](#)). Plugin can provide next data:

- name
- description
- image

You simple should modify your template and next code to `<html>` tag:

```
<html ... itemscope itemtype="http://schema.org/Blog" ... >
```

more about schems you can look at <http://schema.org/> and via next links:

- <https://developers.google.com/+/web/snippet/>
- <https://moz.com/blog/meta-data-templates-123>

**Q:** When I try repost on Google+ I view wrong image.

**A:** Currently plugin does not detect post images and provide it as repost logo but you can set universal logo in configuration manager (`default_post_image` parameter)

## TODO

- Detect page image and provide it as microdata

## Compatible

You need DokuWiki greater or equal to **2012-01-25 «Angua»**. From this version jQuery is present in wiki core.

Also you can try run it with more old DokuWiki and jQuery plugin:

<http://www.dokuwiki.org/plugin:jquery>

## Download/install

You can install plugin via Plugin Manager and next link:

[googleplusoneng.tar.gz](http://googleplusoneng.tar.gz)

## Forks

Plugin based on googleplusone version by Pztrn: <http://pztrn.name/dokuwiki/googleplus> that based on original googleplusone plugin by Markus Birth: <http://www.dokuwiki.org/plugin%3Agoogleplusone>
